Kindworth
Go-To-Market Strategy

Where emotional intelligence meets measurable culture.

Product: Kindworth KQ™ — Behavioral signal scoring for teams (Slack/Teams + manual recognition)

1. Executive Summary

Kindworth is a culture-performance platform that measures and rewards emotional intelligence (EQ) at work. Our core metric, KQ™ (Kindness Quotient), quantifies contextual kindness, recognition diversity, and balanced reciprocity across private Slack/Teams channels and approved manual logs. Leaders use KQ to identify high-impact behaviors, reduce burnout, and increase retention while reinforcing a healthier culture.

Initial GTM will target mid-market to enterprise organizations with distributed or hybrid teams. We'll lead with a low-friction integration into Slack/Teams, transparent scoring, and a manager dashboard that ties KQ to tangible outcomes (retention, eNPS, manager effectiveness). Phase 1 focuses on land-and-expand within tech, professional services, and healthcare; Phase 2 broadens via partner ecosystems and HRIS marketplaces.

2. Market Overview

Macro Tailwinds:

• Hybrid and distributed work has amplified the need for objective culture analytics.
• Burnout and attrition costs remain high; CFOs demand measurable ROI on people programs.
• HR analytics is moving from engagement-only to behavior + outcome linkage.

Opportunity Theories:

• Bridge qualitative recognition with quantitative, auditable signals.
• Embed into daily flows of work (Slack/Teams) to avoid survey fatigue.
• Provide leading indicators for retention and team health (beyond lagging exit data).

3. Target Audience

Primary Buyers & Stakeholders:

• Chief People Officer / VP People (owns engagement and retention outcomes).
• HR Operations / People Analytics (needs defensible metrics).
• Heads of Engineering, CX, and Sales (managers accountable for culture and performance).
• CHRO-adjacent partners: HRIS admins, internal comms, D&I leaders.

Ideal Customer Profile (ICP):

• 200–5,000 employees (mid-market to enterprise).
• Slack or Microsoft Teams as primary collaboration layer.
• Multi-team or multi-region structure; current pain around burnout/attrition or low manager effectiveness.
• Willingness to pilot with a single department and scale to org-wide.

4. Problem & Pain Points

• Engagement tools are backward-looking and survey-heavy; they miss daily micro-behaviors.
• Leaders lack a trustworthy signal to recognize and reward prosocial behavior.
• Manual recognition is noisy and biased without approvals and context controls.
• CFOs need ROI evidence linking culture initiatives to business outcomes.

5. Value Proposition & Messaging

Core Message:

Kindworth turns everyday acts of support into measurable culture value — giving leaders the visibility to reward what makes teams thrive.

Proof Pillars:

• Embedded Signals: Automated Slack/Teams parsing + optional manual logs with two-party approval.
• KQ™ Scoring: Weighted log formula for volume, diversity, and spread of recognition with guardrails against gaming.
• Manager Dashboards: Retention risk, recognition balance ratios, and team health leading indicators.
• Governance & Privacy: Role-based access, private-channel safeguards, and auditable scoring.

Sample Positioning Statement:

"For people-first organizations, Kindworth is the culture-performance layer that quantifies kindness and accountability — so you can retain great people and scale healthy teams."

Kindworth

6. Channel & Launch Strategy

Primary Channels:

• Product-led growth (Slack/Teams app directories, freemium trials for up to 50 seats).
• Founder-led sales for strategic mid-market accounts (land-and-expand).
• Partnerships with HRIS/IT marketplaces and boutique people-ops consultancies.
• Content engine: case studies, ROI calculators, benchmark reports, and KQ playbooks.

Launch Motions:

• Wave 1 (Design Partners): 5–8 pilot customers across Tech, Professional Services, and Healthcare.
• Wave 2 (Public Beta): App directory listings, gated self-serve onboarding, support SLAs.
• Wave 3 (Scale): Channel partners, enterprise plans, role-based analytics, and SSO/SCIM.

7. GTM Timeline & Phases

Phase 0 – Foundation (Weeks 0–4):

• Finalize KQ scoring v1 and governance controls.
• Ship Slack MVP (events ingestion, approvals, KQ dashboard).
• Create enablement: 1-pager, ROI calculator, demo script.

Phase 1 – Design Partners (Weeks 5–12):

• Run 6–8 week pilots; gather KQ benchmarks by function.
• Publish 2 case studies with quant outcomes (retention/eNPS delta).
• Refine pricing and enterprise security (SSO/SCIM, DLP options).

Phase 2 – Public Beta (Quarter 2):

• App directory launch (Slack + Teams).
• Freemium to Pro conversion path with in-product nudges.
• Channel partner program (rev-share, implementation kits).

Phase 3 – Scale (Quarter 3+):

• Enterprise features (auditing, RBAC, data residency).
• Marketplace integrations (HRIS, LMS, ITSM).

• Customer advisory board, quarterly benchmark report.

8. KPIs & Success Metrics

Acquisition Metrics:

• App installs, workspace activations, PQLs (product-qualified leads).
• Trial → Paid conversion rate; CAC by channel.

Engagement Metrics:

• Weekly active contributors (recognition senders/receivers).
• KQ trend per team; recognition balance ratio; tag diversity.
• Manager dashboard usage; time-to-first insight.

Business Outcomes:

• Retention lift vs baseline; manager effectiveness scores.
• eNPS delta; reduction in regretted attrition.
• Net revenue retention (NRR), expansion ARR, logo churn.
