People Intelligence Beyond Surveys

Kindworth V2 transforms Slack recognition data into workforce intelligence. Predict burnout, identify future leaders, and optimize team health—all from existing conversation patterns.

V2 Intelligence Suite

Novel metrics derived from recognition data—no new surveys required

Burnout Detection

Identify at-risk employees from workload patterns, after-hours activity, and extra work accumulation before it's too late.

Flight Risk Prediction

Detect engagement decline by comparing recent activity to historical patterns. Intervene before resignations happen.

Leadership Pipeline

Data-driven promotion readiness scoring based on cross-team influence, delegation balance, and cultural impact.

Team Health Index

Per-department analytics combining cohesion, equity, and burnout into actionable health scores.

Extra Work Index

Quantify hours spent helping others beyond core responsibilities

Bridge Score

Identify cross-department connectors who break down silos

Giver/Taker Ratio

Recognition economics—who contributes vs. consumes

Reciprocity Score

Measure mutual recognition vs. one-way patterns

Hidden Influencers

Surface high-impact ICs without formal authority

Culture Index

Track organizational health trends over time

How Kindworth Works

Privacy-first intelligence from existing Slack data

1

Connect Slack

Install the Kindworth bot with read-only access. We scan for recognition keywords (thanks, kudos, shoutout) and @mentions—never storing raw messages.

2

Extract Signals

For each recognition: who gave it, who received it, when, and what type. We derive T (tasks), D (diversity), U (unique recipients), plus timestamp patterns.

3

Generate Intelligence

Apply eigenvector-weighted scoring, PDE time-decay, and multi-factor risk models to produce KQ scores, burnout alerts, and leadership rankings.

🔒 Privacy by Design

We process conversations but never store them. Only anonymized metrics (user IDs, scores, timestamps) are retained. Your data never leaves your infrastructure—we can deploy on-premise for enterprise customers.

What Teams Are Saying

Early adopters seeing real results

> *"Kindworth predicted two of our top engineers were at burnout risk. We intervened early—both are still with us and thriving.*

SC **Sarah Chen**
VP People, TechCorp (700 emp)

> *"The Leadership Pipeline surfaced three "hidden" promotion candidates our managers had overlooked. Data doesn't lie.*

MR **Marcus Rivera**
Eng Director, ScaleUp

> *"Team Health Index let us see which departments were siloed. Cross-team collaboration jumped 40% after we acted on the insights.*

EZ **Emily Zhang**
CPO, GrowthCo
