KQ Kindworth

Request Early Access

Measure the behaviors that make teams thrive

Kindworth transforms Slack recognition signals into the Kindness Quotient (KQ)—a real-time culture health metric powered by robust statistics and behavioral science. We process conversations, not store them.

LIVE DEMO · 350-PERSON COMPANY · 365 DAYS

Messages Analyzed 572,384	Recognitions Detected 16,526
Recognition Rate 2.9%	Monthly Avg 1,377
Median KQ 20.5	Top KQ 100.0

How Kindworth Works

1

Listen

Detect recognition keywords (thanks, kudos, shoutout) and @mentions across Slack channels. We process signals—never store raw messages.

2

Extract

For each user: T (recognitions sent), D (tag diversity), U (unique recipients). Apply log1p transform, robust z-scores (median/MAD), winsorize outliers.

3

Score

Build shrinkage correlation K-matrix, extract principal eigenvector weights, apply PDE time decay for cultural momentum → KQ 0-100.

THE KQ PIPELINE · REAL RESULTS FROM SIMULATED DATA

T/D/U → log1p → median/MAD → winsorize → K=(1-α)R+αI → eigenvector → PDE decay → **KQ**

K-MATRIX (A=0.1)

```
[1.00, 0.67, 0.87]
[0.67, 1.00, 0.68]
[0.87, 0.68, 1.00]
```

EIGENVALUE Λ_MAX

2.48

WEIGHTS (T, D, U)

(0.59, 0.54, 0.60)

🔒 **Privacy by Design**

We never store conversation content—only derived metrics (T, D, U per user). This demo uses simulated Slack data for a 350-person company across 8 departments over 365 days. The conversations mirror real workplace patterns, and the mathematical pipeline is identical to production.

What Teams Are Saying

"Kindworth helped us identify culture blind spots we didn't know existed. Our voluntary turnover dropped 25% in Q1.

SC **Sarah Chen**
VP People, TechCorp (700 emp)

"The KQ score gave managers a common language for team health. It's like a fitness tracker for culture.

MR **Marcus Rivera**
Eng Director, ScaleUp

"Real-time culture data instead of annual surveys. Burnout alerts alone saved us three key engineers.

EZ **Emily Zhang**
CPO, GrowthCo
